# Experiment 14: Create a text file "MyFile.txt" in python and ask the user to write separate 3 lines with three input statements from the user.
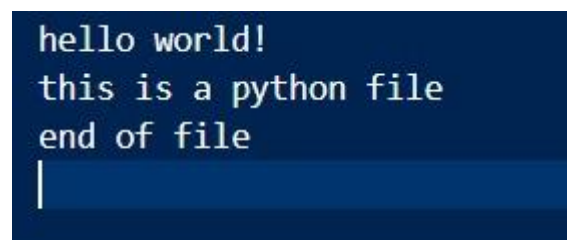

CODE:

```python
# open the file in write mode

with open("MyFile.txt","w") as file:

    # Ask the user to input three lines

    for i in range(3):

        line = input(f"Enter line {i+1} : ")

        file.write(line + '\n')

print("Three lines have been written to MyFile.txt.")
```

OUTPUT:

```
Enter line 1 : hello world!
Enter line 2 : this is a python file
Enter line 3 : end of file
Three lines have been written to MyFile.txt.
```

```
hello world!
this is a python file
end of file
|
```
